

## **Sprechen Sie... Quran?!**

You betcha! You know, these days there's a whole lotta non-Muslims out there who keep saying things that can sure pass for real good interpretations of (some) Holy verses from the Quran, without them ever catching on to it themselves. And that's the best part about it all, don't 'cha know!

Well, sure, people are always gonna talk, and chat, and shoot the breeze; it's part of who we are: a bunch of jibber-jabberers just gibbering and jabbering all day long. That's why them scientist-types calls us social animals and such, you know.

But, these days, like, pick one out of a hat at some time past September of 2021, for example, and you'll for sure hear some fella, or another, going on and on about things like: his download bandwidth bottlenecking, or his wifi signal going in and out, or about how he has only 15 minutes to get home before changes in the weather from that giant hurricane down in the Gulf of Mexico make it rain like cats and dogs on his urban patootie, which happens to be somewhere way up in the Detroit, Michigan area, for example.

So now you're probably saying: well, where's all the science in all of that, for gosh sakes? It just sounds like normal kind of talk to me, you know, especially these days (ie. in the times past Sept., 2021, etc.). And, on top of all that, how's the Holy Quran working into all of it, too, eh?

Well, look, if we jump right down into a verse of the Holy Quran, and start talking about how it says Allah sends down the rain (chapter:verse(s)), or about how Allah has all the forces of nature at his beck and call (chapter:verse(s)), you're just going to roll your eyes for having heard it all before, aren't cha?

So this is what we'll do now: we'll go into how and where all that stuff we're gibbering and jabbering about comes up from, and then, you know, we'll work the Koran into it, too.

And, really, even though these days (ie. the times past Sept. 2021, etc.) it looks normal now for someone to go on and on about their internet connection, their cell phones and computers, and the weather report RSS feed updates they get, and other things like that, you know, it just really isn't.

Why, way back in the day, which'd be some point far out in the boonies from before Sept., 2021, for sure, just to use a telephone, you'd have to walk out in the rain to get to a telephone booth inside some kind of shop or store. If you were lucky, they also just might have a telegram service there for ya, too; That was the closest thing to text messaging or Whatsapp back then, eh?

For sure they'd have newspapers, too, which'd probably be mentioning all that rain, puddles, and pools of water you just trudged through to get there, sort of like a belated heads-up call, I guess. And if you look even more way back in time than that, you'll see there was even lesser technology around for people to use.

Here's the kicker: for all them people living way back in those times, the way things were for them then, was all what they called normal!

So what are we calling normal now, eh?

Nothing we call normal, now, is normal.

It's all scientific and technological!

That's where all of what we're now jibber-jabbering about comes from. It's not normal talk.

In fact, you could think of today's jibber-jabber as a cleaner cousin for Tourette's, if you want: Wi-fi's down! The ISP bottlenecked me! Weather Alert!...

Come on now, if this kind of modern day talk isn't really crazy talk, then, can you please tell me what is?

Oh, well, doesn't that look on your face just give away what you're thinking right now! You don't believe its crazy talk at all, do ya? Sure ya don't! And ya know why ya don't, too!

It's because you don't think these kinds of people come across to others like scientific-types for saying the things that they say, but they actually really do!

Ya, sure, they may not have a degree in science or math, but that don't stop them from using a smart phone, eh? No, it don't.

And it don't stop them from wanting to upgrade to a fancier, faster, fiberoptic internet line either, eh? Or even thinking about making sure that new house they want to buy is in a fiberoptic-enabled neighbourhood block?

No, it don't.

How about looking up the weather forecast at destination one week ahead of that vacation trip they'll be taking there?

Well, wouldn't it be silly not to, especially if they saved up for a couple of years for all that money they're planning to splurge?!

It sure would be silly not to do that, ya know?

So what's the deal, what's going on here?

Ya, sure, if you want to figure it out, then you've gotta key in on who the point-man is in all of this modern set up we got going on here, and also on what that point-man is doing which is pushing normal folk like us up and into the business of science and technology.

And when you do, you'll see that point-man and culprit is a mix of the politician and the businessman who've both managed to round up the eggheads working in STEM (Science, Technology, Engineering, Math), and are making them pull the wagon of modern society towards the frontiers of the future, just like them rugged horses pulled them sturdy wagons, back in them bygone times.

These politicians and businessmen, who are all focused on making millions for themselves and also on working up oodles of kudos for their (political) parties, sell us on their ideas for the progress and prosperity of our country and economy, and convince us that developing top-notch technology is the way to go, if we want to live the good life.

And just what is the good life the rest of us folks want these days, do you wonder?

Simple: a good strong wi-fi signal that doesn't ever cut out, an internet connection always running at out-the-wazoo speeds, picture-perfect weather in that vacation spot we wanna enjoy, and so on, ya know?

So, in some bejesus way or another, what really happens is, you know, all these things become part of the standard of living we got: it's become what we think is "normal," and just the way things should be.

Well, do you know what this way of thinking does to a people?

It brings them up to a level of living where, without even knowing it, they start talking real technical-like, and also start thinking real technical-like, too!

Ya, for sure, in these days now, we're so cushy with how things are running, we don't see how, way back in the day, you'd need to have some kind of certificate and good credentials before you could even imagine a wi-fi signal, or the upload bandwidth needed to smoothly live-stream your bungee jump, for example, or about packing your umbrella 5 days before a downpour ever hits your neighbourhood.

Well, so how does the Holy Quran work into all of this then, eh?

It starts like this:

- anything and everything that STEM professional do has a good sprinkling of math on it
- the math itself usually tells them how much and/or how fast something (like a wifi signal, or an electric current in a wire, or a weather pattern, etc.) is changing, or will have a chance of changing
- this lets STEM professionals design and make technology that can produce, control, or monitor those changes
- that technology is what we see and use as: eg. the wifi enabled device we have, the internet router and cables we use, the live Doppler radar weather report we get, etc.

Next, keeping all this in mind, when we look at our Holy Quran, it says:

....The people of Noah denied the truth, and rejected Our servant, calling him insane... (54:9)

Meaning that, when Prophet Noah ﷺ warned his people about a bad flood a-coming, they didn't think it as the severe weather alert that it was, and you see what happened, don't cha?

Sure ya do!

The point is, they, back then, didn't, and so you can see what happened to them, by golly! (BTW Spoiler Alert: they all drowned!)

And we already talked much before about how the math them scientists do to figure out and make them gadgets and things (eg. like wires, antennas, etc) links up to Holy Quran 54:49.<sup>1</sup>

And, so now, here in 2021, you got your modern day urbanites with their urban patooties, like the ones living up in the State of Michigan, for example, way up there on the map, and just look at how they're stacking up them sandbags, or nailing in that 1/4" plywood real good and sturdy, and all 'cause they got a tiny weather alert ping about the fallout winds and weather from that giant weather cowlick off the coast of Dallas, or New Orleans, etc.

So, what do they need Prophet Noah and the Holy Quran for now, eh? They're doing pretty good as a 2-for-1 deal on their own, aren't they? Oh, ya, for sure they are! They're the ones getting the news, without needing 1) a prophetic revelation or 2) a holy book.

And now they're not even thinking about how this kind of info is actually what would pass for a revelation back in the day!

Then, if we ask them: Sprechen sie... Quran, eh?! They'll reckon: "No, wez don't," but they'z sure's heck do!

And if you're Muslim, you're loving it, and if your not Muslim, you're now learning (about) it!

Look at them non-Muslims, all by themselves, speaking their daily jibber-jabber, and not thinking about how what they're saying is something that, at one point in time, you'd have to be a Prophet of God to know!

And, now, for them, it's all normal talk, and part of their daily life; there's no different way of living that they could think of which'd make sense to them, is there?

The way they live right now, is "normal life" for them.

This means it's normal for them to live: speaking the Quran!

Ya, sure, who don't know our Holy Prophet Mohammed ﷺ done said:

The scholars of my nation will be like the Prophets sent unto the Children of Israel [for their guidance].

And just look at how that turned out for us now: all them smarty-pants STEM folk done pushed the rest of us up and up t'ward that high benchmark up thar, didn't they? For sure they did!

And if you want to see this for yourself, just go ahead and pick a non-Muslim-even a Hindu or Buddist if you want to-and jibber-jabber with them about your wifi, or your bandwidth, or about that rain a-coming in like 4 days' time.

But, when you do, be sure to ask yourself: I wonder if that fella *sprechen sie... Quran?!*

God love ya' oodles and oodles!

Your Brother in Faith,
